Recommendation – Shahar Tamir

Shahar was a member in a team that developed, integrated and deployed Litening 5 – a leading avionic product for fighter aircrafts.

I was working with Shahar for the last two years while I was a system engineer in a project to operationally deploy of one of the products advanced derivatives and Shahar was the SW programmer responsible for several such programs.

During the period of his work Shahar learned exceptionally quickly the tools and practice unique to this program throughout the entire life cycle of the product's Software.

He developed a sharp perception of this very intricate product, working in coordination with developers of other layers of the product.

Soon Shahar was perceived as an authority to other developers, to other project teams and to the customer's representatives.

As a part of the work Shahar took a major role in integrations in customers site where the software met unique hardware and a demanding environment.

Through the period of his work Shahar showed initiative, curiosity, creativity and responsibility.

I recommend Shahar full heartedly and at the same time wish him good luck.

Ofer Rotter

System engineer
